IT Resource Engineer Becomes a VMware Certified Professional

Coopersville, MI – January 6, 2010 – IT Resource Network Engineer, Brent Timmer, has received his VMware Certified Professional Certification (VCP Certification), furthering his expertise in virtual infrastructure.

Achieving the VCP Certification means that IT Resource will be able to support their customers more fully with VMware enterprise features, best practices, and the ability to design and configure a system to support the client's individual needs.

"Attaining the VCP certification broadens my knowledge of virtual infrastructures, including Hyper-V and Xen Server. This broad range of experience and skill helps me hone in exactly what a customer is looking for, and how to help them achieve their end goals in virtualization," Timmer says.

To acquire the certification, Timmer was required to combine hands on experience with weeks of training to prepare for the final exam, which he believes, is one of the harder certification exams in the IT industry.

IT Resource is a provider of Information Technology services throughout the state of Michigan. They provide cost effective IT solutions for customers including consulting, virtualization, unified communications, messaging solutions, and disaster recovery.
